School Bus Security

Key Benefits:

- Student accountability
- Custodial control
- Behavior documentation

ReconaSense® Bus Application

Parents need to know that when their children board the bus for school, supervision does not end. The ReconaSense Bus Application helps ensure that each and every student boards the correct bus, and gets off at their pre-approved stop.

This unique application resides in a ruggedized tablet on the bus that is remotely connected to the school. An embedded card reader in the tablet reads credentials as students embark and disembark the bus, recording the presence or absence of students at all times.

Optional functionality includes:

- Pre-approved guardians who are eligible to escort students from the bus can be designated in the application, which helps ensure that students do not leave the bus stop with unapproved people.

- Drivers have the ability to document bad student behavior on the bus, which is automatically recorded and forwarded to the school for staff to address.

What is ReconaSense?
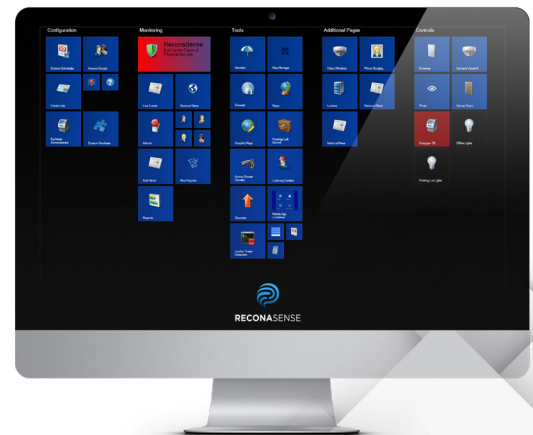

ReconaSense is the award-winning A.I. Physical Security Platform designed to modernize physical security management. It is a sensor-fusion platform that integrates data from virtually any source including access control, video, gunshot detection, perimeter sensors, analytics, audio, HVAC and more. A.I. assistance helps ensure that operators do not miss what is most important, by providing the tools to stay a step ahead of today's threats.

The ReconaSense Bus Application is one piece of a unique solution that helps secure schools in five major ways:

1. Automated detection of external threats
Quickly detect the presence of "blacklisted people", explosions, and objects left behind in real-time.

2. Automated responses
When external threats are detected, ReconaSense automatically raises the school's threat status and triggers preferred responses such as; locking down areas, notifying first responders, broadcasting pre-recorded messages and more.

3. Centrally tracking and scoring behavior issues
Unusual clusters of behavior issues may indicate trouble in a student's world. ReconaSense can centrally log and score volatile behaviors that may come from various classrooms, school activities or even buses. It can spotlight the need for faculty intervention, or other steps designed to help preempt violence before it's too late.

4. Include bus behaviors for an end-to-end view
The ReconaSense Bus Application seamlessly integrates and helps identify student behavior while in transit to and from school. Drivers have visibility to determine who can enter and exit the bus at each stop. They can also track negative student behaviors and communicate them to the school with the touch of a finger.

5. Enhanced communication
The ReconaSense Mobile Application empowers the "See Something, Say Something" policy that can save lives. Staff can easily transmit photos or video clips of potentially concerning events. It also simplifies and integrates communication amongst staff, first responders, students and parents during, and after an incident.

Ensure that your school district has done everything possible to account for student safety during your periods of responsibility.
