

RETHINKING ACCESS CONTROL

The top 6 reasons why it's time to consider a next-generation physical access control system (PACS)

Unlike legacy PACS, next-generation access control is:

INTEGRATED

It takes in the full picture to make better access decisions.

Legacy PACS only give you a siloed view of data.

DATA SOURCES

It detects abnormal behavior early and can change permissions in real time as situations evolve.

Legacy PACS are forensic. They only see one side of the door and they can only help you react to incidents after they happen.

RISK-ADAPTIVE

It dynamically changes permissions based on several critical factors.

Legacy PACS operate on static, role-based permissions and limit the ability to optimize life safety.

INTELLIGENT

It alerts operators to threats or possible breaches and intelligently initiates safety protocols.

Legacy PACS rely on humans to take action.

ACTIONABLE

It rapidly responds to threats with actionable recommendations. Legacy PACS leave you to make critical decisions

during emergencies without support.

It integrates custom

Legacy PACS are difficult to customize to your specific needs.

to protect you better.

policies and risk profiles
