

RECONMOBILE

Stay Safe with On-the-Go Situational Awareness

To achieve proactive security, organizations must mobilize their efforts. Sitting behind a desk watching monitors and responding to alerts severely limits any security posture. By leveraging the strength of community observations and mobile technology, operators can actively participate in and respond to evolving security situations. The ability to observe, adapt and control security from anywhere is critical to creating a seamless and responsive security posture.

Awareness and control capabilities need to be pushed to the edge. Stop a threat from becoming a crisis by ensuring all suspicious activity is collected and that operators are in the right place at the right time with the right tools. ReconMobile provides a comprehensive suite of mobile security applications that can help ensure you're in command of any developing risk situation.

RECONMOBILE Benefits

- Support faster response time
- Discover suspicious activity
- Provide more guard dispatches
- Enable early warning of operational disruptions
- Minimize risk
- Facilitate better decision-making
- Gain unprecedented visibility in emergencies
- Enhance life safety
- Stay ahead of threats

WatchCommander

How fast can you take control? As fast as you can tap your wrist – no matter where or when. This wearable emergency response app makes security operations available wherever and whenever they are needed. Guards can use the wearable iWatch application to respond quickly and easily to active threats and initiate lockdown if an attack occurs. The WatchCommander makes it fast and easy to record observations with voice command, initiate emergency lockdown based on suspicious observations, and open any number of doors.

See Something Say Something

A crowdsourcing application that enables people to contribute observations of suspicious activity and report safety issues from their mobile devices. The See Something Say Something app empowers people to communicate suspicious activity to the security team in real-time. Having more eyes in more places across premises can help prevent a threat before it becomes an incident.

MobileMuster

This mobile life safety application sends security response requests to employees, students, and staff during an incident. In one touch, they can provide safe/not safe updates with a GPS location in real time. Mobile Muster gives organizations a centralized view into the location and safety of its population in real time for unprecedented flexibility and visibility in emergencies.

MobileSOS

This wearable emergency response app enables employees or students to report a safety issue or emergency to security teams and 911 with the touch of a button. With GPS enabled, this app can serve as a beacon to let others know they are in danger. This can also be used by bank tellers as a remote panic button for during a robbery and remote employees working in dangerous conditions.

Mobile Command-And-Control Center With Crowdsourced Insights

The ReconMobile app suite enables security teams to “see” and take action across multiple facilities without having to be stationed at a security desk behind a monitor. This ensures better decision-making, shorter response times, and improved outcomes — whether in an active shooter situation, an urgent life safety matter, or another critical security condition.

MAKING SECURITY INTELLIGENT

ReconaSense helps protect people, assets, buildings and cities with its next-gen access control and converged physical security intelligence platform. By leveraging artificial intelligence (AI), ReconaSense identifies and mitigates potential threats and attacks before they happen giving security teams the ability to go beyond managing data and individual alerts to achieving true situational awareness and rapid response capabilities.
